No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SEQUENCE FROM N.A. (ISOFORMS 1 AND 2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nature 402:769-777(1999).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 thaliana.
```

```
Insoid=P58223-2; Sequence=VSP 008899, VSP 008900;
Note=May be due to a competing acceptor site. No experimental confirmation available;
-!- SIMILMENTY: Contains 5 KH domains.
-!- CAUTION: Ref.1 sequences differ from that shown due to erroneous gene model prediction. At4g18370 and At4g18375 were originally fused into a single gene.
                                                                                                                                                                                                       IsoId=P58223-1; Sequence=Displayed;
Note=No experimental confirmation available;
                                                                                                                                 Event=Alternative splicing; Named isoforms=2;

TISSUE SPECIFICITY: Brain.
DISEASE: Autoantigen in the paraneoplastic opsoclonus myoclonus attaxia (POMA), a paraneoplastic neurological syndrome/disorder (PNS/D) associated with breast cancer, fallopian cancer, and SCLCa and characterized primarily by loss of inhibitory control of motor neurons in the spinal cord and brainstem. Recognized by the IgG autoantibody ANNA-2 (also called anti-Ri).
                                                                                                                                Structure 7:191-203(1999).

-!- FUNCTION: May regulate RNA splicing or metabolism in a specific subset of developing neurons.

-!- SUBCELLUIAR LOCATION: Nuclear.

-!- ALTERNATIVE PRODUCTS:

T "Nova regulates GABA(N) receptor gamma2 alternative splicing via a distal downstream UCAU-rich intronic splicing enhancer.";

Mol. Cell. Biol. 23:4687-4700(12003).

-!- FUNCTION: Functions to regulate alternative splicing in neurons by binding pre-mRNA in a sequence-specific manner to activate exon inclusion. It binds specifically to the sequence UCAUY. Most likely acts to activate the inclusion of exon E3A in the glycine receptor alpha-2 chain and of exon E9 in gamma-aminobutyric-acid receptor gamma-2 subunit via a distal downstream UCAU-rich intronic splicing enhancer.

-!- Subschilula LOCATION: Nuclear.

-!- DISEASE: Defects in NOVAl leads to neuronal death in spinal and brainstem neurons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ģ

TISSUE SPECIFICITY: Abundantly expressed in skeletal muscle, thymus and peripheral blood leucocytes while a lower expression is observed in prostate, spleen, testis, ovary, small intestine, heart, liver, adrenal and thyroid glands.

PTM: PHOSPHORYLATED. THE NON-PHOSPHORYLATED FORM(S) EXHIBITED THE SIRONGEST POLY(RC) - BINDING ACTIVITY.

SIMILARITY: Contains 3 KH domains.

SAUTION: There is probably a frameshift error in the nucleotide sequence of Ref.3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TISSUB=Lymphocytes;

"Role of Nova-1 in regulating alpha2N, a novel glycine receptor

"Role of Nova-1 in regulating alpha2N, a novel glycine receptor

"Role of Nova-1 in regulating spinal cord neurons.";

J. Neurobiol. 52.156-165(2002).

-! FUNCTION: Functions to regulate alternative splicing in neurons by binding pre-mRNA in a sequence-specific manner to activate exon inclusion. It binds specifically to the sequence UCAUY (By similarity). Acts to regulate a novel glycine receptor alpha-2 chain splice variant (alpha-2N) in developing spinal cord.

-! SUBCELLULAR LOCATION: Nuclear.

-! SIBCLARITY: Contains 3 KH domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

Cell. Biol. 20:7479(2000).

-!-FUNCTION: Binds to the dendritic targeting element and may play a role in mRNA trafficking (By similarity). Part of a ternary complex that binds to the downstream control sequence (DCS) of the pre-mRNA. Mediates exon inclusion in transcripts that are subject to tissue-specific alternative splicing. May interact with single-stranded DNA from the far-upstream element (FUSE). May activate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SUBCELLULAR LOCATION: Nuclear. A small proportion is also found in the cytoplasm of neuronal cell bodies and dendrites (By

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Part of a ternary complex containing FUBP2, PTBP1, PTBP2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 similarity).

TISSUB SPECIFICITY: Detected in neural and non-neural cell lines.

MILLARITY: Contains 4 KH domains.

CAUTION: Ref.3 sequence differs from that shown due to numerous frameshifts.
                                                                                                                                                                            FUNCTION, AND INTERACTION WITH PTBP1; PTBP2 AND HNRPH1.
